An aerial photograph of a brick manufacturing plant. A long, yellow metal conveyor belt structure extends from a large white industrial building towards the foreground. The building has a corrugated metal roof with several solar panels installed. To the right of the building is a large, white, rectangular silo or storage tank. The surrounding area is filled with large piles of raw materials, including sand and clay, and various pieces of industrial equipment. The ground is dusty and shows signs of heavy machinery use.

One of the world's oldest and most-trusted sustainable building material.

Why brick?

Naturally creative

A creative range of textures, colours and sizes, make clay bricks a dream material for your home. Clay bricks are enduring and will not fade.

Low maintenance

Clay bricks stay looking great without any painting or other treatments. They are capable of weathering harsh environmental conditions.

Sustainability

Made from organic minerals and naturally abundant sources of clay, they can be re-used and recycled. Clay bricks are the safe choice for you and the environment.

Solid investment

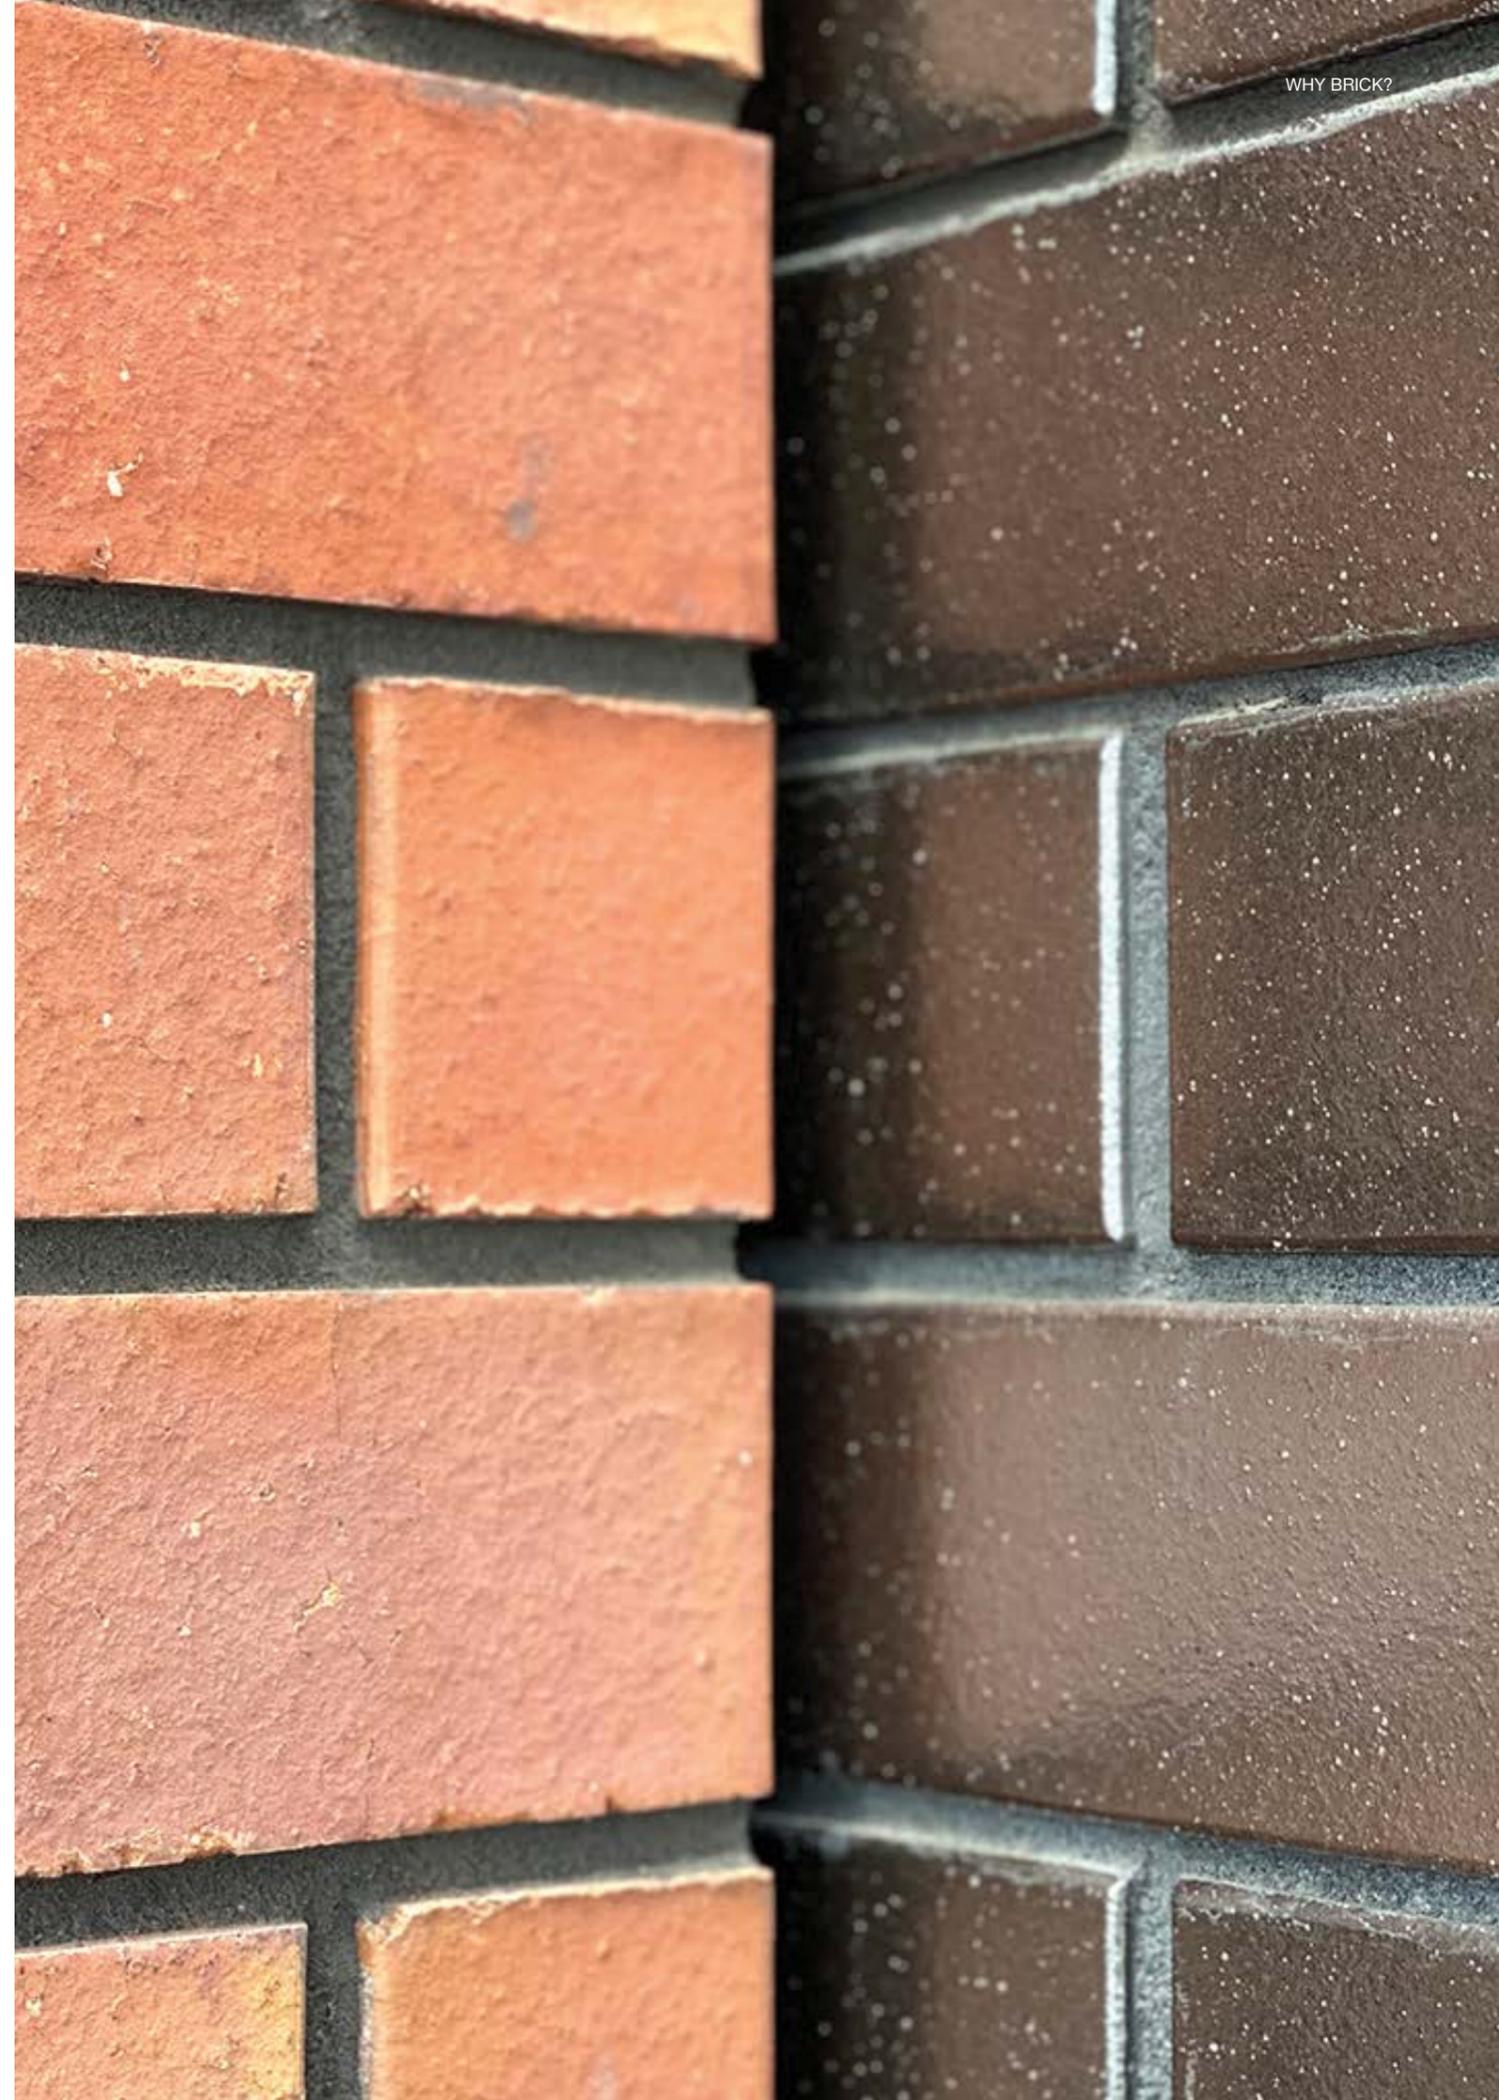

Clay bricks are renowned for their strength and longevity, giving security to investment.

Energy efficient

The natural thermal insulating properties moderate the extremes in building temperatures, keeping it cool in summer and warm in winter, reducing energy consumption. Clay bricks increase the comfort of your home by blocking outside noise.

A natural look

No two clay bricks are identical which is what creates such a unique and natural look. The natural raw materials they contain as well as the kiln firing process creates variation in texture and colour from brick to brick.

Designa Schist

There is nothing more durable, more natural or more breathtaking than stone produced by mother nature.

Introducing a modular stone system, combining the ease of brick installation with the beauty of natural schist.

- **Modular brick, block and panel systems already proven worldwide.**
- **Developed and tested for the New Zealand market.**
- **Low maintenance, low fade, weather resistant and strong.**
- **Adds value, character and natural beauty.**

Render Brick

Whether you want a smooth or rough finish, clay bricks are perfect for being rendered or plastered - letting you achieve the desired look with the security of a clay brick veneer.

We have a wide variety of appropriate bricks in a range of textures and sizes, depending on the desired look.

Painter Brick

Even though clay bricks come in a variety of colours, textures and sizes, sometimes painting your clay bricks can create a cost-effective and unique look.

We supply a variety of clay brick profiles suitable for painting in single through to double height.

What you need to know

- Clay-fired bricks have a natural variation in colour, finish and size. Midland Brick NZ recommends that all bricks be delivered at once for your project, from the same batch, to ensure colour consistency.
- We strongly recommend viewing of the product delivered to site. If there are any concerns about colour or quality, please contact your local distributor prior to installation.
- Tradespeople should take the appropriate measures to ensure the bricks are kept dry and clean during storage on site and installation.
- Your bricklayer is a professional tradesperson and should ensure that all product laid is of acceptable quality and blended from at least three pallets to provide consistency of colour and texture throughout the project. Product laid is deemed to be accepted.
- Midland brick NZ does not warrant that their products will match the brochure or any particular sample or display, as the inherent variation in the manufacturing and printing process means these cannot be colour accurate.
- Some minor chipping and breakage can occur during delivery, offloading and installation of product. It is recommended this product is used for cuts and infills.
- Due to ongoing development, Midland Brick NZ reserves the right to change and delete product lines and specifications without further notice.
- For more technical information and guides, please refer to the [Clay Brick and Pavers Association website](#).
- For more information about onsite storage, laying and viewing requirements of bricks, please refer to the [Brick Veneer Best Practice Guide](#).

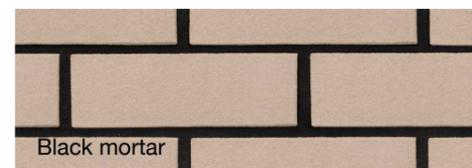

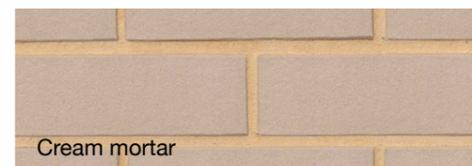

Choose a mortar

Mortar comprises about 15% of clay brick wall surface and can dramatically change the overall appearance of your home by simply choosing a different mortar colour or joint style.

Mortar colour can be used to complement or contrast with the brick. Complementary tones give a more relaxed and harmonious feel, while contrasting mortar can be used to create a more formal, crisp and distinctive look.

For a maintenance-free, rendered look, oxide can be added to the mortar to match your clay bricks. This creates a very contemporary monochromatic finish.

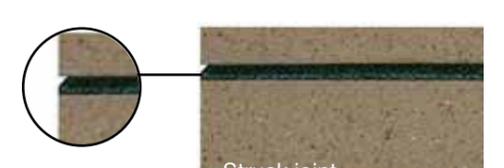

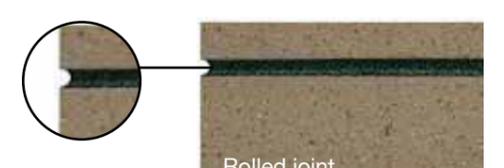

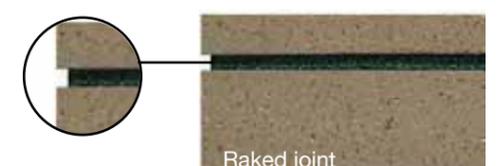

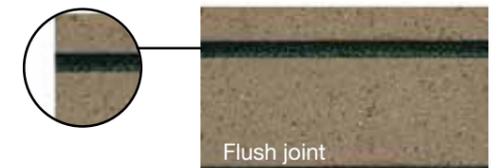

Before you build your new home, discuss your ideas with your builder or a Midland Brick NZ representative.

Choose a joint

The choice of a mortar joint can be used to help create a casual, rustic or formal look for your home. Rolled joints create a clean, contemporary finish and work well with nearly all clay brick styles.

Choosing a flush joint will give a flatter appearance and lighten the overall look of your brickwork. An inset, or square-raked joint can have a more dramatic effect by adding dimension and shadow to the look of your clay bricks
